Safely Reline A Factory-Built Chimney

When a homeowner installs a wood-burning insert into an existing U.L. 127 listed fireplace, relining the existing chimney is critical for performance and safety. M&G DuraVent's UL-listed relining system for factory-built chimneys is the unrivaled and affordable choice, safely protecting you and your family.

NEW and only U.L. listed, patent pending, lining system designed and tested to be installed in a Factory-Built Chimney for wood burning appliances.

You can now reline your older 1700° U.L. 103 rated chimney with our new system and can attach a wood-burning appliance that requires a 2100° U.L. 103 HT system.

You can now reline your inefficient Factory-Built Fireplace and chimney for use with a wood burning insert that requires a 2100° U.L. 103 HT system.

The Factory-Built Reline Kit is available in 6" diameter and in two lengths (25' and 35') for DuraFlex Pro, 316, and 304. Kit includes Cap, Storm Collar, Support Bracket, Ventilation Disk, Centering Bracket, DuraLiner 12" Length, Flex Connector, Flex Length (25' or 35'), Adjustable Band, and Flex Adapter.

Do you have an inefficient factory built fireplace in your house that is letting all of your heated air up the chimney? Even if you start a fire in this appliance, most of the heat will go up the chimney and very little will go into the room.

Do you still have a chimney in your house installed prior to 1990?

These older chimneys are called U.L. 103 rated systems and do not provide enough safety for today's wood burning appliances.

Are you ready to install a modern wood burning appliance or insert to really heat your house and want to re-use what already exists? Our new system will safely protect you and your family while using a new high efficient wood burning appliance with an affordable relining solution that is U.L. tested and listed to be installed into an existing metal factory built chimney listed to U.L. 103 or a chimney that is a component of a factory built fireplace and chimney system listed to U.L. 127.
