

Combustion Air and Design Flexibility

NEW DirectVent Pro Horizontal Termination

An industry-first approach combining tailored combustion air performance with an unlimited number of aesthetic options.

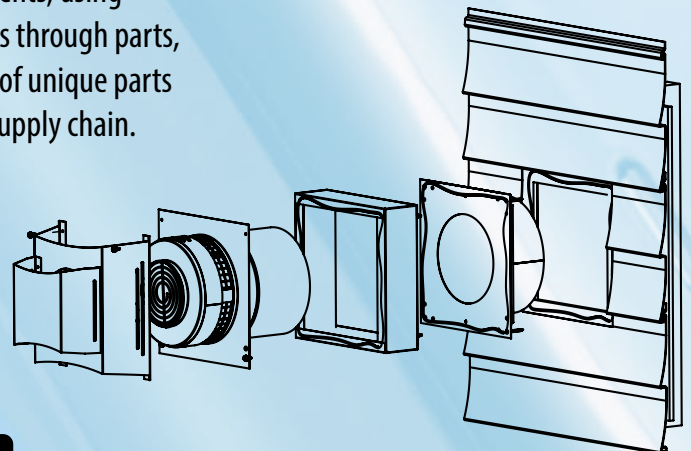

By incorporating interchangeable and customizable shrouds, customers can tailor the look of the termination. Shrouds will be available in a variety of materials and/or designs. The heart of the termination is a patent pending combustion air control. This control reduces the need for internal appliance baffling, and allows for improved combustion performance across a variety of gas burning direct vent appliances. The external footprint has been minimized to achieve an 11" x 11" for both 4 x 6 and 5 x 8 sizes.

The adjustable throttle will allow the installer to fine tune the air intake to the appliance for the best looking flame possible. It can be adjusted to handle the dominate outside wind conditions.

Features and Benefits

- Offers end-users an unlimited number of aesthetic options for their homes.
- Incorporates common appliance design features into vent termination.
- Reduced 11" x 11" profile is more aesthetically pleasing than the original 14" x 14" square termination (17" x 17" with vinyl siding stand off).
- Extensively tested for improved draft and recirculation performance.
- Termination is mounted on standardized components, using standardized wall pass through parts, reducing the number of unique parts needed through the supply chain.
- Patent-pending combustion air engine in concealed behind an 11" x 11" shroud.
