

Now Available! New 6" DVL Stovetop Adapter for Recessed Stove Collar

This new adapter design is compatible with a wider variety of stove collar configurations and provides a more safe and secure connection to stove collars.

This adapter is similar to our current DVL adapter but has a longer inner sleeve and an additional wrapping outer sleeve.

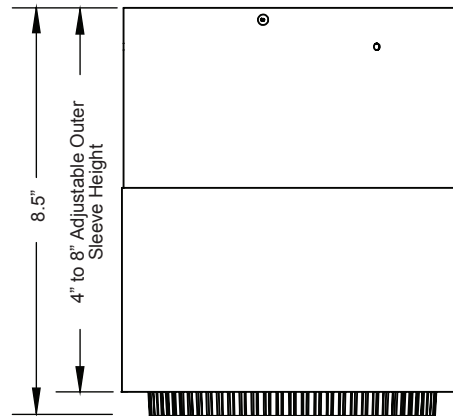

-Longer inner sleeve enables adapter to be used on short stove collars as well as on stove collars with nearby interfering features, like a convection deck.

-Wrapping outer sleeve conceals coupling between stove and adapter, and enables user to install on stoves with collars up to 4 inches tall.

This new design also allows the installer to screw the stove collar to the adapter which is currently not possible on current adapter. The current adapter relies on friction fit and weight of above stove pipe, but would be much safer if adapter was secured with screw.

Sleek design means that after install customer only sees clean black pipe.

SIZE	6"
