

## FasNSeal Now Approved for Use With Montigo Gas Fireplaces

**MONTIGO**<sup>®</sup>  
the art of **fireplaces**

Canadian Heating Products has formally approved the use of DuraVent's FasNSeal special gas stainless venting with a wide range of Montigo vented fireplaces.

Unlike B-Vent, FasNSeal stainless special gas venting is specifically designed and approved for positive-pressure venting. Each joint features a pre-formed gasket that can withstand up to 15" water-column pressure. This makes it ideal for inline power-vented applications.

FasNSeal is available in single-wall and double-wall (W2) formats in your choice of 316L or AL294C stainless steel.

FasNSeal and FasNSeal W2 are listed to standards:  
ULC S636 and UL 1738.

**For specific information regarding Montigo Fireplaces,  
please contact an authorized Montigo distributor, or
