DuraSeal®

Single-Wall, Double-Wall and Double-Wall
Insulated Special Gas Vent

DuraSeal® DS, DSD, DSID, & Flex

QUALITY AND DEPENDABILITY

The DuraSeal flue is manufactured from stainless steel designed for extreme resistance to chloride ion pitting, crevice corrosion and stress corrosion cracking, as well as general corrosion in oxidizing and moderately reducing environments. 29-4C is the standard choice, but also available in 316L, for withstanding the harmful effects of corrosive condensates created by partially or fully condensing high-efficiency natural gas and propane-fired heating appliances.

The Canadian Gas Research Institute found that test results proved 29-4C and 316L to be one of the two “most corrosion-resistant alloys of 20 candidate stainless steels evaluated for resistance to chloride-induced corrosion in condensing and partially condensing gas-fired appliances.”

STRINGENT STANDARDS FOR QUALITY ASSURANCE

To guarantee a perfect fit every time and to avoid built-in stress points or weak areas, tube ends are formed under stringent guidelines and held to exacting standards.

The casing (outer tube on DuraSeal DSD/DSID) is manufactured from type 441 stainless steel to provide long-lasting performance and stability when exposed to the outdoors.

The air space between the flue and casing is 1” on DSD and 2” insulated on DSID, providing close clearances to combustibles, reasonable outside dimensions and an additional heat shield or margin of safety where needed.

BUILT TO LAST

DuraSeal features a smooth weld seam inside and out, which is completely shielded during the welding process. Contamination or molecular changes in the weld seam are avoided and no fillers are used in the welding process.

The DuraSeal double-wall system is fully interchangeable with our DuraSeal single-wall system. Both have been conformed to UL1738 and certified to ULC-S636 safety standards. When installed according to Duravent installation instructions, DuraSeal meets all test requirements for horizontal and vertical, interior or exterior installations. DSID features the same construction as DSD, but with 2” air space filled with mineral wool insulation.

DuraSeal Single Wall (DS)
Vertical Installation

DuraSeal Double Wall (DSD) Vertical
Through-the-Roof Installation

Effective Length:

When assembling two parts together, the joint will overlap 2-3/8". So effective length is normal length minus 2-3/8".

Vertical Installation Requirements

1. The vent system must terminate at least 3 feet above the roof line and at least 2 feet higher than any portion of the building within 10 feet. This limitation can be removed if an engineering analysis demonstrates normal and safe operation of appliance.

2. When terminated at a height of more than 10 feet, the stack must be supported by a Guy Section.

3. The vent system must terminate with one of the DuraSeal terminations.

Installation

Each DuraSeal vent length and component features our DuraLock system and Viton® o-ring gasket, which insure a gas- and water-tight system. Parts are easily pushed and fastened together instantly and effortlessly.

DuraSeal can be taken apart and easily reassembled, making inspection, maintenance or rerouting of DuraSeal systems simple and straightforward.

DuraSeal provides an extensive range of components and accessories, made of stainless steel, allowing any type of installation. On top of the common components, we also offer special parts that help simplify installation, such as the 2-degree elbow and 43-degree tee (simplifying pitching on a horizontal vent) or the 18" and 36" adjustable lengths (to help maximize ease of installation). Connecting the DSD to a heater is effortless with one of the many adapters approved by heating appliance manufacturers. Heating equipment can be operated immediately upon completing a DuraSeal installation, as no cure time or cleanup is required.

Note: If viton caulking is used at the boiler adapter or an adjustable length, there is a cure time of 24 hours.

When venting Category I, II, III, or IV appliances or type L vented appliances, DuraSeal must be used for the entire length of the system. Do not mix pipe, fittings, or joining methods from different manufacturers. Every vent system must be planned and installed for optimum performance and safety. The venting system must be free to expand and contract and must be supported in accordance with these instructions. (Check for unrestricted vent movement through walls, ceilings, and roof penetrations). Refer to the gas appliance manufacturer's instructions to determine venting requirements and limitations with respect to installation and use of the appliance. It is the responsibility of the installer to contact local building and fire officials concerning any installation restrictions and/or inspection requirements that may apply. Permits may be required before starting and installation.

- If required by the appliance manufacturer, a Drain Tee Cap must be located as close as possible to the appliance flue outlet. Depending on the arrangement of the vent, more than one drain may be required. Unless a Drain Tee Cap is supplied with the appliance, install a DuraSeal Drain Tee Cap.
- More than one Category II, III, or IV appliance may not be connected into the same vent system unless the appliance manufacturer specifically approved such a system and the appliance is designed for multiple venting.
- DuraSeal must not come in contact with plumbing or electrical systems.
- Maintain rated clearances to combustibles over the entire length of the vent system.
- DuraSeal shall not be routed into, through, or within any vent, such as an existing masonry or factory-built chimney that is connected to another appliance.

**DS Screened Termination**

Use for horizontal through-the-wall terminations. Check installation instructions for restrictions on horizontal terminations, such as minimum distance from windows and doors.

Ø	Product Code	K Factor
3" to 24"	DSØST	.14

**DS 30° Screen Termination**

Use for through-the-wall termination. Deters rain and other elements from entering the vent system. Check installation instructions for restrictions on horizontal terminations, such as minimum distance from windows and doors.

Ø	Product Code	K Factor
3" to 24"	DSØSTA	.70

**DS 90° Screen Termination**

Use for through-the-wall termination. Deters rain and other elements from entering the vent system. Check installation instructions for restrictions on horizontal terminations, such as minimum distance from windows and doors.

Ø	Product Code	K Factor
3" to 10"	DSØST90A	.50

**DS Exit Cone**

Use for vertical termination. Creates static back pressure to adjust harmonics. Venturi effect increases velocity of flue gases. Reduced opening provides for a smaller cross section to deter rain from entering the system.

Ø	Product Code	K Factor
3" to 24"	DSØEC	.60

**DS Termination Tee With Screen**

Use for standard and high-wind through-the-wall terminations. Check installation instructions for restrictions on horizontal terminations, such as minimum distance from windows and doors.
