

duravent™

DuraPlus®

All-fuel, triple-wall chimney system

UL 103 HT

Specifications

Applications

DuraPlus Chimney is a triple-wall, all-fuel chimney for use with wood stoves, fireplaces, furnaces, boilers, water heaters, or other appliances fueled by wood, oil, coal, or gas.

Materials and Construction

Inner Wall: 0.016" 430 stainless steel

Outer Wall: 0.016" 430 stainless steel or 0.018" galvanized steel

Intermediate Liner: 0.018" aluminized steel

Insulated layers of ceramic blanket plus ventilated air space. Locks tightly with a precision twist-lock connection.

Clearances

2" clearance to combustibles.

Diameters

6", 8"

Listings

UL Listed to UL 103 HT (MH7399).

UL 103 HT System

DuraPlus

DuraPlus is designed to stay cool on the outside to provide a hot draft on the inside to boost stove efficiency, and provide a fire-safe design that protects both the chimney and the building. This triple-wall chimney features two insulating layers (ceramic blanket plus air space). The ceramic blanket insulation is held securely in position, eliminating hot spots common with loose-fill type insulations. In the event of a creosote fire, the compressible blanket insulation permits the chimney liner to expand outwardly in a radial direction.

Designed for normal, continuous operation at 1000° F flue gas temperatures, DuraPlus is subjected to rigorous and stringent HT requirements of the UL standard, including one hour at 1400° F, plus three ten minute chimney fire tests at 2100° F.

Typical Installations

Attic Offset

Cathedral Ceiling
Roof Support

Through-the-Wall

Manufactured Home

Installation Key			
1	DVL or DuraBlack Stovepipe	12	Tee Support Bracket
2	Ceiling Support Box	13	Wall Strap
3	Wall Thimble	14	Firestop Radiation Shield
4	DuraPlus Chimney	15	Snap-Lock Adapter, DVL/DuraBlack Chimney Adapter, DuraBlack Slip Connector
5	Attic Insulation Shield	16	Extended Roof Bracket
6	Roof Flashing	17	DVL or DuraBlack Chimney Adapter
7	Storm Collar	18	DVL or DuraBlack Tee
8	Chimney Cap	19	DVL or DuraBlack Elbow
9	Elbow		
10	Elbow Strap		
11	Tee with Cap		

- Refer to our Typical Venting Installation drawings to select the appropriate component parts for your installation.
- A DVL/DuraBlack Chimney Adapter or DuraBlack Slip Connector must be used when connecting DVL or DuraBlack stovepipe to a Ceiling Support or Wall Thimble. A Snap-Lock Adapter must be used when attaching snap-lock stovepipe to DuraPlus.
- A Wall Thimble must be installed with an appropriate section of chimney pipe for all horizontal through-the-wall installations. To accommodate thicker walls a wall thimble extension can be field fabricated.
- An Attic Insulation Shield must be used in all installations that pass through an attic, regardless of whether the attic is insulated or not. If chimney is enclosed in a chase in the attic space, an Attic Insulation Shield is not required.
- A Firestop Radiation Shield must be used when a chimney passes through a floor or ceiling without a Ceiling Support Box.

Planning Your Installation

Figure 1

The following recommendations are a general guideline to assist in the layout and selection of the chimney components needed for your installation. Always follow DuraVent Installation instructions before installing your chimney system (enclosed with the cap or support box). Installation instructions can be viewed online at www.duravent.com, under catalogs and instructions.

- The diameter of the chimney should match the outlet size of the appliance. An improperly sized chimney results in poor draft and excessive creosote formation.
- Measure the diameter of the appliance flue outlet. Select the chimney and either DVL or DuraBlack connector stovepipe with the same size diameter as the appliance flue outlet.
- Determine if the installation is a through-the-roof installation or a through-the-wall installation. A through-the-wall installation will require additional components (Wall Thimble, Tee w/ Cap, Tee Support, and Wall Straps).
- Install the chimney in the interior of the structure whenever possible. A cold exterior chimney will produce less draft and will generate more creosote.
- If possible, avoid offsets that serve to restrict the natural draft. A straight vertical installation is more efficient and less likely to develop creosote. If an offset is required to avoid rafters or other obstructions, measure the horizontal distance required and the vertical height available. Both 15° and 30° elbows are available. Elbows greater than 30° are not allowed in the United States. A maximum of two offsets in a single installation are permitted. Refer to the offset table in the back of this catalog. At least one Elbow Strap is required for each offset. Elbow Straps ensure adequate support.
- Determine the minimum chimney height above the roof line. Building codes require a minimum of 3' above the roof penetration and at least 2' higher than any portion of a building within 10'. See figure 1. The termination cap is installed above that point. If chimney is more than 4' above the roof penetration an Extended Roof Bracket is required.
- Measure the roof pitch. For example, a 6/12 pitch has a vertical rise of 6" over a horizontal distance of 12". Select the appropriate flashing.
- Determine the total length of chimney and stovepipe required for the installation. To calculate the installed per length of 6"-8" DuraPlus chimney pipe, subtract 1 1/2" per joint. Subtract 1 1/4" per joint of DuraBlack stovepipe. Subtract 1 1/2" per joint of DVL stovepipe. Minimum chimney height, at sea level of straight vertical chimney is 10' to 15' above the appliance outlet. Higher elevations, or the use of elbows or a tee, will require approximately 30% to 60% more height to provide for an adequate draft.
- Be fire safe. Maintain at least 2" clearance to combustibles. Follow local building codes and have your chimney inspected by a certified professional.

Through the Ceiling Kit

Kit includes: DVL/DuraBlack Chimney Adapter, Snap-Lock Adapter with Trim, 24" Square Ceiling Support Box with Insulation Collar and Trim, Adjustable Flashing 0/12-6/12, Storm Collar, and Chimney Cap. Only available in 6" diameter. Pipe not included. Can be used for flat or vaulted ceiling installations.

Use for typical through-the-roof installations.

SIZE	6"
ORDER #	6DP-KTUP
STOCK #	810017011

Through-The-Wall Kit

Kit includes: DVL/DuraBlack Chimney Adapter, Snap-Lock Adapter with Trim, 9" DuraPlus Chimney Length, Wall Thimble, Tee with Cap, Wall Straps (2), Tee Support Bracket, and Chimney Cap. Only available in 6" diameter. Use for through-the-wall installations.

Note: Chimney length and Tee with cap have galvanized steel outer wall. Stainless versions are offered individually.

SIZE	6"
ORDER #	6DP-KOUT
STOCK #	810017012

Manufactured Home Kit

Kit includes: DVL/DuraBlack Adapter, 24" Square Ceiling Support Box with Trim, Adjustable Flashing 0/12-6/12, Chimney Cap, Storm Collar, and (2) 24" DuraPlus Chimney Pipe (galvanized). Only available in 6" diameter. Can be used for cathedral ceiling installations. Use for manufactured home through-the-roof installations.

Note: This kit will be discontinued in 2026.

Chimney Pipe

Designed for appliances tested and listed for use with wood stoves, fireplaces, furnaces, boilers, water heaters, or other appliances fueled by wood, oil, coal, or gas. 6", 9", and 12" chimney pipe has 1" insulation blanket; 24", 36" chimney pipe has ½" insulation. To calculate the installed length of DuraPlus chimney pipe, subtract 1 ½" from each length of chimney pipe.

Additional protective carton filler for shipping is available, items have stock numbers with (CF).

Elbow Kit

Kit includes: (2) elbows and one Elbow Strap.

Use for offsets around obstructions such as rafters, ridgepoles, or joists. May have two pairs of elbows, if needed. Offsets greater than 30° are not permitted in accordance to UL 103 standards. Elbows swivel 360° at base (angles are not adjustable). A pair of elbows is required to return an offset chimney back to vertical. Available in stainless steel (KSS) or galvalume (K) outer wall.
