

DuraFlex® Pro

DuraFlex® Pro is the ultimate in flexible steel liners for strength and flexibility. This heavy-duty stainless flex features 20% more stainless steel per foot when compared to other stainless flex products. This added weight is due to deeper corrugations that add significant tensile strength and “slinky-like” flexibility.

Unlike other flex products that are quite stiff and difficult to uncoil, DuraFlex® Pro wants to unroll straight out-of-the-box. This added flexibility allows it to easily snake its way down through offsets that would otherwise snag or obstruct the insertion of traditional stainless flex liners.

If you install solid-fuel fireplace inserts, the kits below are available on a special-order basis. The first four feet of the flex comes pre-ovalized. This allows you to easily pass the liner down through most smoke shelves & damper sections. The kit also includes a round-to-oval outlet adapter, top plate with integrated collar, and rain cap. The adapter, collar, and cap all feature our fast-connect band for a professional, high-quality installation. This fast-connect band also makes cap removal a breeze for future inspection & sweeping access.

DuraFlex® Pro is made with corrosion resistant 316 Stainless Steel and is listed to both UL 1777 and ULC S635.

Ask your distribution representative for pricing and availability.

DuraFlex® Pro Ovalized Top Plate/Cap Kit

Kit includes: Welded Top Plate with Clamp, Rain Cap with Clamp, Oval to Round Insert Adapter with Clamp, and DuraFlex Pro length with the first 4 feet ovalized. Flex remains secured to the Storm Collar/Top Plate when removing the cap section for inspections and cleaning.
