

### M&G DuraVent Releases PolyPro Double Wall at AHR EXPO

April 28, 2015

Vacaville, CA - M&G DuraVent announced the release of PolyPro Double Wall at AHR EXPO 2015.

PolyPro Double Wall provides separate outer metal shells in 5", 6" and 8" diameters for the PolyPro single-wall gas vent system, acting as a support system and insulator for the PolyPro pipe lengths, elbows, and appliance connections.

In order to meet the requirements of each job, PolyPro Double Wall supports both horizontal and vertical terminations and affords installers the ability to transition from stainless steel venting with the use of adapters.

A [video has been released on YouTube](#) to show how to install PolyPro Double-Wall in a vertical installation.
