

NEW FOR PELLET INSERTS Ventinox 4" Tee w/3" Branch & Increaser.

- Completely welded to remain air-tight. Welding also eliminates adding a silicone seal in the field at the seams.
- Compact design allows for easier installation in tight spaces.
- Laser-welded seams allow for precise fit to flue collar.
- Utilizes a high temperature silicone seal which eliminates the need for high temperature sealant at the flue collar connection. (this new design is great for service work as the part will easily slide off the flue collar for cleanings)
- High temperature seal on the clean out cap which is great for cleanings and eliminating the need for silicone sealant.
- Gear clamp connection to the stove's flue collar provides a positive mechanical connection.
- Gear clamp connections to flexible chimney liner provides a positive mechanical connection. (silicone sealant is required at the liner connection.)
- Gear clamp connection on the clean-out cap provides a positive mechanical connection.
- Made of corrosion resistant 444 stainless steel to withstand the acids formed when burning multi-fuels in corn stoves.
- Can be used with DuraVent's DuraFlex SW, PRO, 316, and 304.

Description	Stock #
4" Ventinox Short Body Tee w/ 3" Branch	4VFT3B
